

Freud's Theory

Sigmund Freud believed he had discovered mental _____ and the forces that flow between them. He thought that people did not have free will or choice but behaviour is the result of unseen, unlearned, and _____ processes. Freud proposed three structures: the _____, the ego, and the superego. The only structure humans have when they are born is the _____. Personality develops in a series of stages. Eventually a child will develop a superego. The superego cannot distinguish between the imagined and the _____. Freud suggested that all current mental problems are based in a time in your past, which is your _____. He invented the first scientific, modern theory of _____.
